SUMMARY

Software Engineer specializing in native Android Development with a strong foundation in full-stack enterprise architecture. Proven track record of delivering mission-critical financial mobile products serving over 100K daily users using modern Android frameworks (Jetpack Compose, Kotlin, MVVM). Leverages deep experience in backend microservices and API design (ServiceNow) to bridge frontend architectures with scalable backend infrastructure, ensuring seamless mobile-backend integrations.

SKILLS

Android & Mobile:	Kotlin, Java, Jetpack Compose, Android SDK, LiveData, Retrofit, Room, Coroutines, Flow, Dagger2 / Hilt, Mockk, Mockito
Architecture:	MVVM, Clean Architecture, SOLID Principles, Agile (Scrum), UI/UX
Backend & Web:	C/C++, JavaScript, Express, Node.js, RESTful APIs, Microservices
Tools & Platforms:	Android Studio, Git, Postman, Jenkins, Jira, Firebase, Claude Code, Gemini
Databases:	RDBMS / SQL, MongoDB / NoSQL

EXPERIENCE

ServiceNow <i>Software Engineer - IC2</i>	Hyderabad, India June 2025 – Present
- Engineered dynamic, Server-Driven UI (SDUI) backend APIs for the ServiceNow Mobile App, enabling role-based component rendering and client-side UI configuration driven by auth payloads. - Architected core value-tracking modules within the AI Control Tower, empowering enterprise clients to monitor, govern, and quantify ROI generated by enterprise AI agents. - Built responsive UI dashboards (Lit JS, Tailwind CSS) and robust backend microservices to compute real-time metrics and usage analytics for enterprise AI workflows. - Optimized platform database queries, schema designs, and background scheduled jobs, reducing API response latency and data payload overhead for mobile and web clients. - Honored with the ServiceNow LAMA Award (Q2 2026) in recognition of outstanding performance, technical execution, and high-impact product delivery.	
Wells Fargo <i>Software Engineer (Android)</i>	Bengaluru, India June 2024 – June 2025
- Engineered core modules for the Mobile Deposit product used by over 100K daily users, ensuring high reliability for critical financial transactions. - Integrated the MiSnap SDK for seamless check image capture, designing custom XML interfaces and managing complex navigation flows using Jetpack Navigation. - Architected features using MVVM, utilizing ViewModel for state management, alongside Retrofit, OkHttp, and Dagger2 to ensure a scalable and maintainable codebase. - Achieved robust application stability by writing comprehensive unit tests using Mockk, Mockito, and JUnit, successfully preventing regressions across release cycles. - Collaborated in Agile sprints with backend engineers, QA, and product managers; recognized with an "Exceeds" performance rating for delivering highly stable, production-critical features.	
Wells Fargo <i>Program Associate (Software Engineer)</i>	Bengaluru, India July 2023 – June 2024
- Designed and built an internal API interceptor tool to capture and modify API calls between mobile applications and backend servers, significantly accelerating mobile debugging. - Engineered a Generic Routing Handler and dynamic middleware to fuzz API responses, empowering 15+ mobile scrum teams and 50+ QA testers to simulate edge cases and network failures. - Built an accompanying web configuration dashboard for real-time JSON response modification and mock generation.	

FEATURED PROJECTS

VaCart – Real-Time Train Vacancy Tracker <i>Compose, Kotlin, Hilt, Flow, Coroutines, Retrofit</i>
- Built a native Android app tracking train seat availability in real time using Jetpack Compose and Material 3 UI. - Implemented MVVM architecture with Kotlin Flow for asynchronous data streams, ensuring smooth UI state updates and efficient REST API polling.
CoWall – Shared Lock Screen Wallpaper <i>Kotlin, Koin, Firebase</i>

- Developed an Android app enabling real-time lock screen wallpaper syncing between users via Firebase Realtime Database and Storage.
- Employed an event-driven architecture using Koin for lightweight dependency injection.

AuthKey CLI | *Go/Node.js, OAuth, System Architecture*

- Developed a secure command-line interface tool to automate the generation and rotation of API authentication keys, streamlining local development workflows.
- Implemented encrypted local storage for sensitive user credentials, enforcing security best practices akin to Android's Keystore system.

Mozilla Browser Extension | *JavaScript, WebExtensions API, DOM Manipulation*

- Built a lightweight browser extension to intercept and modify background network requests, improving developer productivity and browser experience.
- Leveraged background scripts and message passing for efficient state management, demonstrating strong fundamentals in background processing and asynchronous data flows.

Password Manager | *Jetpack Compose, Room Database, AES Encryption*

- Built a high-security local credential manager app incorporating AES encryption for local storage security, featuring modern Material 3 design and dark mode support.

EDUCATION & HONORS

Veermata Jijabai Technological Institute (VJTI)

B.Tech in Information Technology (CGPA: 8.98 / 10.0)

Mumbai, India

July 2019 – May 2023

- **Awards:** UI/UX Track Winner at HackFrost; Runner-Up at Centenary & Quasar Hackathon.
